

# 2024 Water Quality Report for the City of Alma

Water Supply Serial Number: 0140

This report covers the drinking water quality for the City of Alma for the 2024 calendar year. This information is a snapshot of the quality of the water that we provided to you in 2024. Included are details about where your water comes from, what it contains, and how it compares to United States Environmental Protection Agency (U.S. EPA) and state standards.

Your water comes from seven groundwater wells, with depths ranging from 105 to 162.5 feet and the Pine River, as necessary. The Gratiot Area Water Authority (also known as GAWA) treats and softens the well water prior to pumping into the City's water distribution system. The State performed an assessment of our source water to determine the susceptibility or the relative potential of contamination. The susceptibility rating is on a seven-tiered scale from "very-low" to "very-high" based on geologic sensitivity, well construction, water chemistry and contamination sources. Well #7 was ranked moderately low. Well #1 was ranked as having a high degree of sensitivity to potential contamination. Newer wells #8, #9, #10, #11, & #12 were installed after the assessment was completed and are currently not ranked.

There are no significant sources of contamination to the well field. In 2023, GAWA completed a major update to the already existing wellhead protection program.

The Pine River is susceptible to contamination by illegal dumping and runoff and has a susceptibility rating of very high. As of February 2018, the Pine River intake has only served as a back-up source in case of emergency. No water was taken from the Pine River for treatment since February of 2018.

If you would like to know more about this report, please contact the City of Alma Water Division at 525 E. Superior St., (989-463-8349), or [waterplant@myalma.org](mailto:waterplant@myalma.org). You may also visit the City website at [www.myalma.org](http://www.myalma.org).

**Contaminants and their presence in water:** Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate

that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the U.S. EPA's Safe Drinking Water Hotline (800-426-4791).

**Vulnerability of sub-populations:** Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune systems disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. U.S. EPA/Center for Disease Control guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

**Sources of drinking water:** The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. Our water comes from wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

**Contaminants that may be present in source water include:**

- **Microbial contaminants**, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- **Inorganic contaminants**, such as salts and metals, which can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture and residential uses.

- **Radioactive contaminants**, which can be naturally occurring or be the result of oil and gas production and mining activities.
- **Organic chemical contaminants**, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, and septic systems.

To ensure that tap water is safe to drink, the U.S. EPA prescribes regulations that limit the levels of certain contaminants in water provided by public water systems. Federal Food and Drug Administration regulations establish limits for contaminants in bottled water which provide the same protection for public health.

## Water Quality Data

The table below lists all the drinking water contaminants that we detected during the 2024 calendar year. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. Unless otherwise noted, the data presented in this table is from testing done January 1 through December 31, 2024. The State allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants are not expected to vary significantly from year to year. All the data is representative of the water quality, but some are more than one year old.

Terms and abbreviations used below:

- Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
- Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
- Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.
- Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.
- Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.
- N/A: Not applicable
- ND: not detectable at testing limit
- ppm: parts per million or milligrams per liter
- ppb: parts per billion or micrograms per liter
- ppt: parts per trillion or nanograms per liter
- Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

1 Monitoring Data for Regulated Contaminants

Regulated Contaminant	MCL, TT, or MRDL	MCLG or MRDLG	Level Detected	Range	Year Sampled	Violation Yes/No	Typical Source of Contaminant
Arsenic (ppb)	10	0	1.525	1.0-2.3	2024	NO	Erosion of natural deposits; Runoff from orchards; Runoff from glass and electronics production wastes
Nitrate (ppm)	10	10	0.021	N/A	2024	NO	Runoff from fertilizer use; Leaching from septic tanks, sewage; Erosion of natural deposits
Fluoride (ppm)	4	4	0.44	N/A	2024	NO	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
Sodium <sup>1</sup> (ppm)	N/A	N/A	54	N/A	2024	NO	Erosion of natural deposits
TTHM Total Trihalomethanes (ppb)	80	N/A	20	N/A	2024	NO	Byproduct of drinking water disinfection
HAA5 Haloacetic Acids (ppb)	60	N/A	5.5	N/A	2024	NO	Byproduct of drinking water disinfection
Chlorine <sup>2</sup> (ppm)	4	4	1.32	0.81-1.82	2024	NO	Water additive used to control microbes
Total Organic Compounds (TOC)	TT	N/A	45% Removal (15% is required)	32-53%	2024	NO*	Naturally present in the environment
Nephelometric Turbidity Units (NTUs)	95% of 4 hour compliance periods must be less than 0.34 NTUs		100% <0.34 NTUs	0.05-0.20	2024	NO	Measure of the cloudiness of water due to soil runoff. Used to monitor effectiveness of filtration system.
*It has been determined there was no Treatment Technique violation through an Alternate Compliance Criteria (ACC).							

<sup>1</sup> Sodium is not a regulated contaminant.

<sup>2</sup> The chlorine "Level Detected" was calculated using a running annual average.

Per- and polyfluoroalkyl substances (PFAS)								
Regulated Contaminant	MCL, TT, or MRDL	MCLG or MRDLG	Level Detected	Range	Year Sampled	Violation Yes/No	Typical Source of Contaminant	
Hexafluoropropylene oxide dimer acid (HFPO-DA) (ppt)	370	N/A	<2	N/A	2024	NO	Discharge and waste from industrial facilities utilizing the Gen X chemical process	
Perfluorobutane sulfonic acid (PFBS) (ppt)	420	N/A	<2	N/A	2024	NO	Discharge and waste from industrial facilities; stain-resistant treatments	
Perfluorohexane sulfonic acid (PFHxS) (ppt)	51	N/A	<2	N/A	2024	NO	Firefighting foam; discharge and waste from industrial facilities	
Perfluorohexanoic acid (PFHxA) (ppt)	400,000	N/A	<2	N/A	2024	NO	Firefighting foam; discharge and waste from industrial facilities	
Perfluorononanoic acid (PFNA) (ppt)	6	N/A	<2	N/A	2024	NO	Discharge and waste from industrial facilities; breakdown of precursor compounds	
Perfluorooctane sulfonic acid (PFOS) (ppt)	16	N/A	<2	N/A	2024	NO	Firefighting foam; discharge from electroplating facilities; discharge and waste from industrial facilities	
Perfluorooctanoic acid (PFOA) (ppt)	8	N/A	<2	N/A	2024	NO	Discharge and waste from industrial facilities; stain-resistant treatments	
Inorganic Contaminant Subject to Action Levels (AL)	Action Level	MCLG	City of Alma Water <sup>3</sup> 90 <sup>th</sup> Percentile		Year Sampled	Number of Samples Above AL	Typical Source of Contaminant	
Lead (ppb)	15	0	0		2023	0	Lead service lines, corrosion of household plumbing including fittings and fixtures; Erosion of natural deposits	
Copper (ppm)	1.3	1.3	0		2023	0	Corrosion of household plumbing systems; Erosion of natural deposits	

<sup>3</sup> Ninety (90) percent of the samples collected were at or below the level reported for our water.

## Information about lead:

Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. The City of Alma is responsible for providing high quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for at least 5 minutes to flush water from both your home plumbing and the lead service line. If you are concerned about lead in your water and wish to have your water tested, contact the City of Alma Water Department at 989-463-8349 for available resources. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at <https://www.epa.gov/safewater/lead>.

Our water supply has no known lead service lines, 135 galvanized service lines presumed to be previously connected to lead (GPCL), and 173 service lines of unknown material out of a total of 3,088 service lines. If you would like to know more about this report, please contact: Doug Sierakowski – City of Alma Water Systems Superintendent, 989-463-8349 or [waterplant@myalma.org](mailto:waterplant@myalma.org).

Monitoring and Reporting to the Department of Environment, Great Lakes, and Energy (EGLE) Requirements: The State of Michigan and the U.S. EPA require us to test our water on a regular basis to ensure its safety. We met all the monitoring and reporting requirements for 2024.

We will update this report annually and will keep you informed of any problems that may occur throughout the year, as they happen. Copies are available from the City of Alma Water Department (989-463-8349), Alma Municipal Building (525 E. Superior St.) or Alma Public Library (500 E. Superior St.). The report may also be viewed on the city website at [www.myalma.org](http://www.myalma.org). This report will not be sent to you unless requested.

We invite public participation in decisions that affect drinking water quality. City of Alma Commission meetings are held the 2<sup>nd</sup> and 4<sup>th</sup> Tuesdays of each month at 6:00 PM at the Alma Municipal Building. Additionally, the Gratiot Area Water Authority (GAWA) meets the 2<sup>nd</sup> Friday of each month at noon at the Alma Public Library. Please check the city's web page for possible date/time changes prior to the meeting date. For more information about your water, or the contents of this report, please contact the City of Alma Water Division at 989-463-8349 or [waterplant@myalma.org](mailto:waterplant@myalma.org). You may also visit the city website: [www.myalma.org](http://www.myalma.org). For more information about safe drinking water, visit the U.S. EPA at <http://www.epa.gov/safewater>.
